Artificial Intelligence for Everyone

Machine Learning Workshop Series

Presented by: Yüvika Singh (KREATE and Computer Science,
University of KwaZulu-Natal)

&

Ajith Sampath (KREATE and ARC, University of KwaZulu-Natal)

Date:

**21 September to
26 October 2022**

Venue:

**H1 BUILDING, WESTVILLE CAMPUS, UNIVERSITY OF
KWAZULU-NATAL**

RSVP Essential, Friday 16 September 2022

CLICK HERE

TO RSVP

Paid internships for selected participants upon completion of the series.

Futurist Ray Kurzweil of Google predicts that "By 2029, computers will have human-level intelligence".

A computer's "intelligence" is referred to as Artificial Intelligence. Artificial Intelligence (AI) is intelligence demonstrated by machines that simulates human intelligence processes.

AI is everywhere and has in some way or the other shaped your life, and it will most likely continue to do so.

Stephen Hawking had said that AI will reach a "new form of life that will outperform humans", and he mentioned that AI will destroy middle-class jobs.

Whether or not AI suggests doom for our lives, our professions, and our universe, is yet to be decided. The best way to prepare yourself is to be informed.

Join us as we collectively explore and discuss AI, in particular, a thriving area of AI called Machine Learning. The series will begin at a very basic level, and progress towards building AIs of our own.

You will learn what Machine Learning is, and be equipped with the skills to build your own Machine Learning algorithm and then apply this to projects found within your discipline.

Coffee and Lunch will be served.

Enquiries only to Yüvika Singh | **Email** - singhY1@ukzn.ac.za
